# Gonio

An adjustable, wearable device for knee rehabilitation that monitors patient's seated exercises in real time and shares data with their physical therapist.

Exercise data stored in the cloud

Sensor data read and processed by the app

Physical Therapist accesses patient data

Patient wears sensors while doing PT exercises

Product Features

- Encourages patients to do exercises every day to keep up a streak
- Tracks range of motion in real-time with 1° accuracy

- Provides a quick overview of each patient's progress
- Gives in-depth data on patient progress for physical therapists to view before visits

Market

Cost: $40   Price: $300   Profit: $260
